

A satellite image of Earth, showing a large portion of the Western Hemisphere. The image is characterized by a vibrant, almost rainbow-like color palette, with reds, oranges, yellows, greens, and blues. The colors appear to represent different landmasses and ocean depths. In the upper right quadrant, a small, dark, oval-shaped object is circled with a thin black line. The object has a textured, elongated appearance, possibly resembling a small satellite or a piece of debris. The overall image has a grainy, high-contrast quality typical of older satellite photography.
